

Replication programs for Section I

Replication data for Koren, Miklós and Silvana Tenreyro. 2012. "Technological Diversification." *American Economic Review*.

Please cite the above paper when using these programs.

table1.do

This Stata (version 10) do-file reproduces Table 1 in the paper.

Only uses publicly available data, which, for your convenience, we have made available in the `data` folder.

Requires `outreg2`, which you can install with:

```
ssc install outreg2
```

table2.do

This Stata (version 10) do-file reproduces Table 2 in the paper.

Uses firm-level data from Standard&Poor's *Compustat North America* database, 2010. This is proprietary data which we cannot make available, but can be purchased from a number of vendors. You need the *Business Segments* datafile to replicate our results. Once you have the datafile in Stata format, the code should run with minimal adjustments.

Also requires `outreg2`.
